Dr. BENJAMIN ANTONIO ROCHA FARIA.

Professor of Hygiene and Mesology in the Faculty of Medicine
of Rio de Janeiro; Ex-Inspector-General of Hygiene.

Physician in Charge :

Dr. RAYMUNDO BANDEIRA.

Matron :

Miss EMILY ASTON.

1893-94.

REPORT OF THE PRESIDENT OF THE BOARD OF DIRECTORS
FOR 1893-94 PRESENTED AT THE ANNUAL GENERAL
MEETING OF SUBSCRIBERS HELD JULY 31ST, 1894.

Gentlemen,

In accordance with the statutes of the Strangers' Hospital the President's Report for the social year ending June 30th, 1894, is herewith presented to subscribers.

As various Reports relating to special departments in the work of the Hospital are printed below in full, this Report will aim at summarising in more general review the events connected with the past year.

The year has been a most important one for the Hospital. Its capacities have been thoroughly tried and its utility put to the severest test. And though even this year has largely been one in which the Hospital has been making its experience and feeling its way, the Directors trust that the benefits which it has undoubtedly been the means of bestowing will ensure both confidence in its management and working, and also that continued and even increased support of which it stands in need if it is perfectly to perform its important mission.

It must be remembered that the large amount of income arising during the past year from non-subscriber's fees cannot always be counted upon, this large amount being due to the exceptional condition of affairs on the bay which is not likely to be repeated. There is the more need therefore that the annual subscription list should be augmented by further subscribers in order to meet the wants of less exceptional years.

FINANCES.

In the Report submitted at the last Annual Meeting the amount expended on Property was stated at Rs. 258,590\$940 And there is to be added for the year just completed..... 32,438\$710

Making a total of 291,029\$650

against Rs. 293,259\$920 received as donations since the foundation. Donations are throughout this Report treated as capital and subscriptions as income.

The current expenditure of the year reached Rs. 61,885\$230 whilst the income from annual subscriptions (Rs. 24,924\$000) and fees from patients (Rs. 31,933\$000) reached Rs. 56,857\$000, the apparent deficit in the working thus being about 5,000\$, which will however be reduced on the recovery of Rs. 2,232\$500 patients fees outstanding on June 30th.

By the statement of accounts printed below the Hospital was on the 30th of June indebted to the Treasurer for Rs. 3,690\$550, which together with an account for work on nurses' chalet for about 5,000\$ due to the Rio de Janeiro City Improvements Co. are the only outstanding liabilities beyond the amount of Rs. 14,000\$000 obtained on loan from several Firms, as appearing in the previous year's accounts.

PROPERTY.

The Report of the Building Committee printed below will shew the present condition of the property together with the additions and improvements made during the past year.

The Nurses' Chalet has been completed, the actual cost having exceeded by 2,500\$000 the estimate of Rs. 19,500\$000 as stated in the last annual Report.

Though the situation of the Hospital on a hill has its advantages it creates some difficulties in the conveyance of patients up to the buildings. The present method of conveyance for such patients as need it may be maintained; but it would be highly beneficial if something in the shape of a light railway and car, as already suggested in last year's Report, could be arranged whenever funds will permit.

With regard to the Hospital itself there are certain additions that a year's experience of its working shews to be almost imperatively necessary.

One of these is the erection of an isolated ward or chalet for the reception of surgical and non-infectious cases at such times as the main building is occupied by fever patients. The want of such a resource has, during the height of the recent fever season, necessitated refusal of admission on several occasions to this class of patients.

Another, calling for even more immediate attention, is the erection of an outside inspection ward, where suspicious or doubtful cases, whose malady upon admission to the Hospital has not sufficiently declared itself, may be placed for preliminary observation. Suspicious symptoms are not infrequently illusory; and it is not fair that patients suffering from what may be only a slight ailment should be subjected to the risks that must arise from proximity to declared cases of fever and infection. In his Report Dr. Bandeira, the Physician in charge, insists on this as an immediate necessity, and in a private communication to the Directors describes it as a *sine qua non*.

A third addition, and one that must commend itself as hardly less necessary, is the erection away from the main building of a ward for convalescents. It is obviously desirable, when patients have reached a certain stage of convalescence that they should be removed from the immediate neighbourhood of fever wards and fever patients. The difficulty during the recent season of finding any such adequate retreat at times when the Hospital was most crowded necessitated in not a few cases the premature discharge of convalescents from the Hospital.

Such are some of our more pressing wants. And it is hoped that funds will be forthcoming for the satisfaction of at least the most imperative of them, an observation ward.

CASES TREATED.

Interest on the work of Hospital must evidently centre mainly on that portion of the past year during which the fever epidemic was prevalent. As the Report of Dr. Bandeira, the Medical Officer in charge shews, the number of admissions for the six months ending December 1893 was comparatively small. During that time 25 patients were admitted of whom 23 were discharged cured. It was from January onwards in the present year that the serious work began. At times the capacities both of the Hospital and of its staff were taxed almost beyond due limit. By an extension of the scope of the Hospital sanctioned at a General Meeting of subscribers in August 1893, permission was given for the admission at non-subscribing rates of captains and officers (apprentices counting as officers in embryo) of foreign ships lying in the harbour. The great sickness prevailing in the

port in the early months of the year, largely aggravated by the anchoring of ships in unhealthy corners of the bay to which they were compelled by the exigences of the Revolution, sent many such patients to seek the benefits of the Hospital. In fact, of the 172 patients treated from January to the end of June 112 were from the ships. One of these, the "Laurelbank" of Glasgow sent us ten patients suffering from yellow-fever, all of whom were discharged from the Hospital cured. Expressions of gratitude both verbal and material have been numerous from this class of sufferers who at length have found a place where they can be attended in their sickness by doctor and nurses who know their ways and speak their language.

The Medical Report shews that of 172 cases treated from January to June 149 were cases of yellow fever. If we may deduct 15 of these, reported as having entered the Hospital in an almost dying condition, we have as result that out of 134 cases admitted in a condition in which medical and nursing assistance could be of any value 104 were discharged cured while in 30 cases the services of the Hospital were unavailing.

Taking the statistics for the whole year some noticeable differences present themselves between the proportions of deaths to admissions of the various nationalities which sent cases to the Hospital. The total admissions for the year were 197. Of these 53 died giving a percentage of 26.95 deaths on all cases admitted. Patients of British nationality contributed 151 of the total admissions and 31 deaths, with a percentage of 20.53. Those of American nationality numbered 22 with 10 deaths giving a percentage of 45-45. Of 7 Germans admitted 5 died, giving a percentage of 71.43. Admissions from other nationalities numbered 17 with 7 deaths and a percentage of

41.18. Thus it will be seen that the percentage of deaths among patients of British nationality was less than half that of any other and 6 below the mean percentage. Perhaps these figures may be taken to suggest that intending patients of other nationalities than the British would do well to put the same early confidence in the medical and nursing treatment of the Hospital that British patients have for the most part done during the past year, and not (as was frequently the case) entrust themselves to the care of the Hospital only after ineffectually trying other expedients outside.

It is with great regret, though hardly perhaps with surprise, that we have to record that the whole of our nursing staff were at one time or another attacked by the reigning epidemic or with other maladies directly due to their devoted labours among the sick in their charge. In the just debt of praise that Dr. Bandeira's Report pays to those labours all who have watched and certainly all who benefited by them will warmly and emphatically join. We have to lament the death of one of our nurses from yellow fever with complications and of one of the outside staff on the Hospital premises also from fever.

STAFF.

The Staff in some respects remains the same as last year, while there have also been considerable alterations.

Dr. Bandeira who for part of the past year was Honorary Visiting surgeon has recently been duly appointed to the post of Physician in Charge of the Hospital. Dr. Rocha Faria continues his connection with and interest in the Hospital as Honorary Visiting and Consulting Physician. Dr. Stewart resigned

his position as House Surgeon in February of this year, a consequent arrangement being entered into with Dr. Bandeira to visit the Hospital twice daily during the prevalence of fever and on emergency also if called for.

Miss Emily Aston arrived here and entered on her duties as Matron in September last. Sisters Bright and Jackson, who were on the original staff at the opening of the Hospital, are still with us. During the social year four other nurses have come and for one cause or other gone, one of these by death as already noticed.

The calls upon our staff for outside nursing have been but slight.

The actual nursing staff consisting at present of only the Matron and two sisters, the Directors through the agency of the Matron have undertaken to engage four new nurses thoroughly qualified, as noticed in the Matron's Report printed below.

The same Report notices the valuable and volunteered assistance in many helpful ways outside their own work of various other members of the household staff during times of the greatest pressure,—assistance which the Directors are glad to notice and acknowledge in the General Report.

WAYS AND MEANS.

The Directors are glad to be able to record a substantial increase in the annual subscriptions for the past year as compared with those for the year 1892-93. This money however stands exclusively in the names of Banks, business firms and private persons established or residing in Rio de Janeiro. And while most grateful for much money in the form of Donations that they have received from abroad,

the Directors would greatly rejoice could they place on their annual subscription list the names of many old friends of Rio and of its British and American Institutions now no longer resident here. And this they feel sure will be the case now that the Hospital would seem to have established itself in such a measure as to invite further confidence.

By the summary note under the head of Finance in this Report it will be seen that the Hospital has been almost able to pay its way by the aid of the annual subscriptions and patients' fees. Yet there is much more that needs to be done in the way of extension which would involve further annual outlay. It is therefore greatly to be hoped that friends both here and abroad who have not yet done so will favour the Institution with annual subscriptions.

The extensions, some of them of the first necessity, some of them highly desirable have been already noticed in this Report. And for the accomplishment of these further assistance in the shape of Donations must be looked for from the generous and well-disposed.

ACKNOWLEDGMENTS

are due to many friends who have presented the Hospital with gifts in addition to their money subscriptions.

Thanks are due to our Honorary and Visiting Physicians for their valuable services; to Mr. Lamoureux for the many important services he has rendered as well as for printing, advertising etc; to Messrs. Gordon, Landon and Johnston in London for their kind assistance in connection with the engagement of our Nursing Staff as well as for their valued general interest in the Institution; to Mr. E. A. E. Phipps for

the pecuniary help rendered by his solicitations among the merchants of New York and New Orleans; to the Royal Mail Steam Packet Company for reduced passages for nurses; to Messrs. Lamport and Holt for free passages for the same; and to many other friends of the Hospital whose names and gifts are specified among Miscellaneous Donations on a later page of this Report.

In conclusion we have again to record that our relations with the Board of Health and other Brazilian authorities have continued to be throughout the year of the most friendly character.

H. Mosley.

D. Roberts.

Directors.

on behalf of Mr. J. B. Kennedy, President, absent.

REPORT OF THE BUILDING COMMITTEE.

July, 1894.

In the first place the Committee desire to express their sincere thanks to Mr. H. L. Wheatley, as Engineer in charge for the great interest and labor he has bestowed on the property of the Association, and to whose efforts and ability the good maintenance of the estate has practically devolved.

During the year various improvements and work have been effected in the main building comprising a speaking tube communication between the ground and first floors, an awning for the centre skylight, tiling of walls around the sinks, ventilators, alteration of rooms, curtains to varandahs, painting, destempering, etc.

A spacious covered way was also erected between the main building and the Nurses' Chalet.

With regard to machinery the steam disinfecter has given complete satisfaction but the gas engine and pump have continued to give much trouble and anxiety, and no time should be lost in replacing them by a new and larger apparatus.

It is also desirable that the matter of steam drying machinery be considered, as during times of prolonged rains great trouble might ensue from any failure in this connection.

Another matter to be considered is the supplying of shades supported by brackets to the west side of the building which might be effected at a maximum cost of 2,000\$000.

In conclusion the Committee are pleased to report that the Building and grounds are in a highly satisfactory state of maintenance.

D. ROBERTS.

H. C. TUCKER.

Acting pro tem

REPORT OF THE PHYSICIAN IN CHARGE, JULY 1894

Gentlemen.

Owing to the special condition of the Bay of Rio, consequent on the revolution, resulting in the closing of the Marine Hospital at Jurujuba there were ample reasons why the Strangers' Hospital was so besieged by Captains and Officers of ships anchored in the harbour during the recent epidemic of yellow fever.

The number occasionally exceeded the limits of the hospital not from the want of beds but the cubation of atmospherical air in the rooms and the excessive work entailed upon the nurses, so much so that outside help had to be engaged.

Rigorous and extreme measures had for a time to be taken to prevent admission of non-subscribers, owing more particularly to sickness amongst the nursing staff, the matron and three of the nurses being down with yellow fever whilst the others had infectious diseases such as lymphatitis and gastro enteritis there being in addition sickness amongst the servants, the number of our staff unable to discharge their duties by reason of sickness, being 10 persons altogether.

With regard to the capacity of the hospital I may remark that in order to afford a regular direction to the sanitary service of a hospital for the treatment of infectious diseases in a hot climate, it is desirable to have several detached pavilions for the ventilation

and disinfection of the rooms, when required, as well as for the isolation of cases of different diseases or cases in different stages of the same diseases. What I would therefore entreat is, the construction of an isolated building specially for the treatment of infectious diseases, another for convalescents, and a third one of smaller dimensions for suspicious cases or for observation, the latter in my opinion being an immediate necessity as explained in my detailed note on the subject.

During the half year ending 31st December 1893, 25 patients were admitted of whom 2 died and 23 were discharged cured.

From January to June of this year there were 172 patients, 149 of whom had yellow fever and 23 various complaints. Of the yellow fever patients 15 entered in an almost dying condition. The actual returns are 6 dead from different incurable diseases, 30 from yellow fever, in addition to the 15 entered dying, whilst 121 were discharged cured.

In view of the advanced stages of disease at which many patients sought the benefit of the hospital the result is certainly satisfactory, and as the importance of immediate treatment becomes more generally known and insisted on, it is considered that much better results will eventually be obtained.

Before concluding the present report I feel obliged to mention the zeal and activity of the nursing staff in general, and of their courageously exposing their lives in the treatment of the patients and aiding the service in every possible way even outside of their duties : a statement which would doubtlessly be endorsed by the many doctors who visited and treated at the hospital during the past 6 months amongst these being Dr. Rocha Faria our consulting Physician, Dr. Bento Maria da Costa, Dr. Alfredo

Barcellos, Dr. Paulo Cesar de Andrade, Dr. Francisco de Castro, Dr. Havelburg, Dr. Stewart, Dr. Cleary, Dr. Felipe Meyer, Dr. Eisenlohr, Dr. Julio de Moura, Dr. Nægeli, Dr. Werneck and Dr. Catta Preta, Dr. Salles Guerra and others.

DR. RAYMUNDO BANDEIRA,
Physician in charge.

REPORT OF THE MATRON. OCTOBER 1893 TO JUNE 1894.

To the Directors and Subscribers of the Strangers' Hospital.

Gentlemen, — I have the honor to present the following report as to the work and general condition of the Nursing Staff of the Hospital.

From November 1893 to January 1894 the staff consisted of seven members, a matron and six sisters.

Towards the end of January one sister resigned and returned to England.

During these months there were very few applications from outside for nurses.

Four cases only were nursed in their own homes. When the epidemic of yellow-fever began to be felt it was doubtless realized that the staff would be fully occupied, and could not be spared for duties apart from the Hospital.

As may be supposed the staff I have mentioned, seven members, is too many for the usual work of the Hospital, but in the fever season it is hardly adequate to the needs of the situation.

For fever nursing the modern theory is that the nurses so employed should have short hours on duty, and much out door exercise. This, during the months of the epidemic, was not possible, for the difficulty, always present in places where Training Schools for nurses do not exist, maintained here, and competent help could not be obtained when needed. But as the majority of the patients were attached to the Mercantile Marine, and had contracted yellow-fever under conditions not likely to be repeated, the same experience may not arise, and therefore need not be provided for.

During the epidemic much useful work was done by our own household staff.

Without the aid of some members, who undertook in the most kindly spirit various additional duties, the work generally could not have been efficiently carried through by the Nursing Staff.

Between February and April there were six cases of illness amongst the Staff, of which two proved fatal, one, unfortunately, being Miss Clayton, a most valued and efficient nurse.

Towards the end of March a sister, whose health had suffered from the long tropical summer, was recommended to return to England.

Later another sister resigned her appointment and left to be married.

The Staff now consists of the Matron and two sisters.

As you are aware it is proposed that four sisters should be chosen through the instrumentality of an influential member of the Royal British Nurses' Association.

These ladies should leave England as soon as the necessary preliminaries are arranged and should, in any case, be ready for the season when, according to previous experience, an increased number of patients may be expected, and when additional help will therefore be acceptable.

It would be unfitting to close this report without an expression of gratitude to the Physician in Charge, Dr. Bandeira, for the assiduous attention he has bestowed upon the Hospital generally, and for the courteous manner in which he has assisted the administration.

I have the hour to be, Gentlemen,

Your obedient servant,

EMILY ASTON,

Member Royal British Nurses' Association.
